

How does cardiofun work?

- 1 At the website „www.cardiofun.de“ you can set a playlist for every calendar day and each basic-system (up to 8 systems are possible) over a protected domain. You just need internet access to do so. Your settings would then be saved on our server.
- 2 The installation and management of media onto your cardiofun-systems can take place in two different ways:
 - 2 a The data can be transmitted via satellite to each cardiofun-system in your gym.
 - 2 b The cardiofun-systems receive all data via DSL.
- 3 The playlists can be set via the cardiofun module to program each television in the gym. The playlists can be made up of various media like videoclips, movies, pictures and all available television programmes.
- 4 The sound is shared to the speakers, and to every installed apparatus in the gym. Via the loudspeakers the sound of one basic-system can be heard in the whole gym. If you use more than one system, your customers are able to choose sound to each system (= program) directly on the training equipment and listen over the headphones.
- 5 The customer has got the possibility to view a film, listen to favourite songs, or even to enjoy a live sport event during the workout in the gym.
